Weekly Coal Production

Production for Week Ended:
December 19, 1987

Summary

U.S. coal production in the week ended December 19, 1987, as estimated by the Energy Information Administration, totaled 19.2 million short tons (bituminous coal and lignite, 19.1 million short tons; Pennsylvania anthracite, .05 million short tons). This was 5.4 percent lower than production in the previous week, and was 2.3 percent higher than production in the corresponding week of 1986.

Cumulative U.S. coal production from January 1 through December 19, 1987, was estimated at 891.8 million short tons, 2.2 percent above the 872.6 million short tons produced in the comparable period in 1986.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
